

Cloud Replication

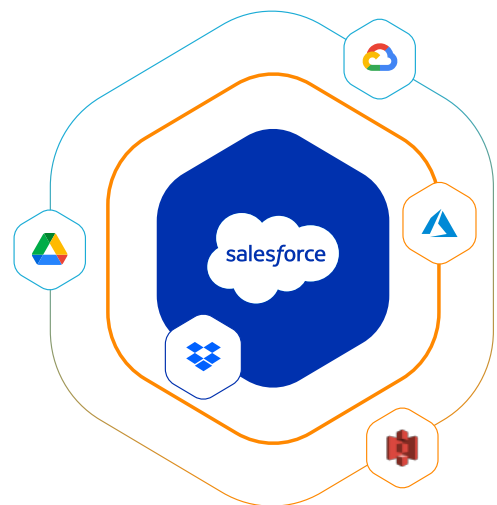

Data teams and analysts need Salesforce data, they shouldn't have to navigate complex APIs and integration layers to access it

At enterprise scale, a solution requires experienced architects to manage and maintain performance as your Salesforce data grows.

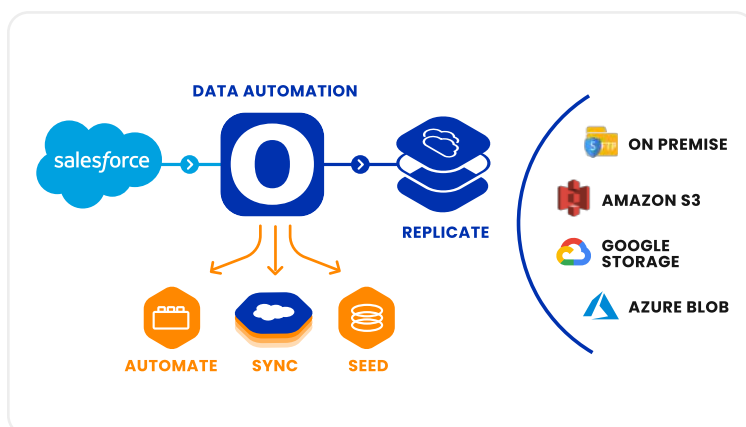

Continuous innovation leads to rapid updates, and downstream data teams struggle to keep up - locking away key data to power your business. That's why data teams need access to data in a simple, flat file format that's securely encrypted end-to-end.

Why Cloud Replication?

-  **FEED YOUR AI/BI PROJECTS WITH COMPREHENSIVE DATA**
Access every version, any time, across all your records, and easily create a historical data lake.
-  **SOLVE ANY REPLICATION CHALLENGE WITH ONE API**
Provide weekly full extraction or at 15 minute intervals to power time series analysis or near real time updates of data
-  **MAXIMIZE EFFICIENCY WITH ZERO IMPACT ON API CALLS**
Leveraging your backup schedule allows you to reuse data with no impact on API usage and performance

THE SALESFORCE ENTERPRISE PARTNER OF CHOICE

-  **Never break your integration.** Our platform automatically adapts to Salesforce schema changes, and new objects and fields appear immediately in your target data store.
-  **Fastest extraction in the market.** Extract up to 300 million records per hour, with the most complete data for time series analysis.
-  **Data model-aware replication.** Target only the data and metadata needed. We support full or incremental replication on a coherent family of objects and relationships.
-  **Extract once, replicate as needed.** Limit API call consumption by extracting data from Salesforce once, for both your backups and replication.

Cloud Replication

Automate extraction of Salesforce data in the format your data teams know and love.

To get the most from your Salesforce data, you need a simple, effective way to deliver it to outside systems. Effortlessly integrate *all* your data into your teams’ daily routine by using Odaseva Cloud Replication to quickly get your data anywhere you need to:

- 

COMPLY WITH REGULATIONS
Keep every version of your Salesforce data (including Event Logs), metadata and files in your own storage
- 

FEED PROJECTS WITH TIME-SERIES DATA
Access every version, any time, of all your records, and easily create a historical data lake
- 

CONNECT WITH THE SYSTEMS THAT ARE NATIVE TO YOUR DATA ANALYSTS
Azure Blob Storage, Amazon S3, Google Cloud Platform storage, Dropbox, Google Drive, and SFTP
- 

SOLVE REPLICATION CHALLENGES
Our flexible API supports any amount of Salesforce data in multiple formats

Trusted By

Designed for scale. Designed for the enterprise.

Secure your mission-critical Salesforce data to protect against common threats like data loss, corruption, and non-compliance.
