

# Managed Archiving Services for Salesforce

## Harness the Power of Odaseva's Managed Archiving

It is best practice for companies to archive their Salesforce data, but as data volumes grow, data models evolve, and regulations change, maintaining compliant and effective archiving becomes increasingly complex.

Many organizations manage archiving policies and jobs internally, yet policies must constantly adapt to new rules and changing data. Data deletion demands expertise, and compliance teams must repeatedly demonstrate regulatory adherence.

Odaseva Managed Archiving Services ensure compliant, optimized, and future-ready data archiving through ongoing expert support.

## Managed Archiving Services by Odaseva

✓ **Ensure your archiving is always optimized**

Get continuous optimization of your archiving app. Odaseva adapts to your evolving data models, new regulations, and governance frameworks so you can dedicate more time to other strategic Salesforce improvements.

✓ **Elevate compliance**

Receive audit-ready performance and optimization reports for both internal audits and regulators.

✓ **Benefit from specialized support**

Our experts manage your archiving projects and goals. We refine your archiving policies to help you reach your different data objectives.

# Managed Archiving Services for Salesforce

## Unlock the Full Power of Your Data

- Assess Data Model**  
 Analyze your data model, review audits and permissions, and align requirements with your data retention and AI-readiness goals.
- Configure Application**  
 Configure the Odaseva app to extract and delete data based on your rules, compliance needs, and future AI usage patterns.
- Test Archival Process**  
 Perform scale testing in a full-copy sandbox and validate the archival process to ensure data accuracy and completeness.
- Deploy to Production**  
 Install and configure the archiving app in your Production Org, ensuring alignment with your change management and compliance protocols.
- Optimize Archiving**  
 Optimize the archiving app to clear backlogs and maintain a steady state.
- Generate Audit Reports & Advise on Policies**  
 Produce audit-ready reports and advise on refining archiving policies to support AI/ML data pipeline integrity, regulatory needs, and best practices.
