

Managed Backup Services for Salesforce

Optimize your data protection with expert support on your side

Customer data is your organization's most valuable asset, and protecting this data against breaches and loss isn't Salesforce's responsibility – it's yours.

Odaseva Data Backup and Restore ensures your critical Salesforce data is protected. But while your data may be fully protected today, your backup strategy must evolve as your data volumes grow, data models evolve, and Salesforce pushes updates. Maintaining protection requires continuous adjustments, which can put pressure on internal resources.

Odaseva Managed Backup Services (MBS) eliminates this burden at no cost. Our experts customize, monitor, and optimize your backup strategy so it evolves seamlessly with your needs. We setup your plan, proactively anticipate challenges, and continuously ensure your data is always protected and ready for what's next.

68%

of Salesforce architects don't know how frequently data recovery is tested.

- ✓ **Save time and resources**
Offload complex backup processes to Odaseva to free up your teams resources.
- ✓ **Gain proactive insights**
We help you identify potential backup blockers early, and collaborate to stabilize execution and adjust schedules per your needs.

Managed Backup Services for Salesforce

Our team of experts will proactively help you through each stage

1 Initial Analysis

Start by analyzing your production org’s size and complexity, then back up data and metadata to assess initial job performance.

2 Customized Strategy

Use analysis results to inform and build a tailored backup strategy, resulting in a customized plan specific to your org’s needs.

3 Coverage Configuration

Perform scale testing in a full-copy sandbox and validate un-archival process to ensure data accuracy and completeness

4 Backup Optimization

Design the Backup Plan with parallel execution to minimize backup times and reduce API consumption efficiently.

5 Ongoing Management

Use robust monitoring tools to ensure all backup plans run smoothly, quickly addressing authentication, platform, or job performance issues and failures.
